SUMMARY

As a dedicated Engineering Student at MUST University, I'm immersed in the transformative fields of Mechatronics, Robotics, and Automation Engineering, slated to graduate in June 2024. My academic journey is complemented by a robust hands-on experience in AVR embedded systems and proficiency in computer vision technologies like OpenCV, as well as a strong foundation in programming through PyQt and Arduino. My education has been further enriched by earning certifications, including edX's CS50's Introduction to Computer Science, which deepened my computational thinking and problem-solving skills. With a passion for integrating innovative solutions, I stand at the forefront of engineering breakthroughs, ready to contribute my expertise and fresh perspective to the evolving landscape of automation and intelligent systems.

EDUCATION

Misr University for Science and Technology Giza, Egypt
Bachelor of Science in Engineering
Graduated: June 2024 | GPA: 3.33

PROJECTS

CS50X final project | *C language*

Project Overview: The final project was a command-line tool named **Clinic Management system**, designed to perform management tasks. This project encapsulated a range of skills and concepts I had acquired throughout the course, including data structures, algorithms, memory management, and user interaction via the command line.

IMT'S Final project | Metal Detector | *C, Embedded C, Eclipse.*

- Leveraged AVR microcontrollers to develop an embedded system that could interact with various sensors and actuators.
- Used AVR drivers using DIO, HAL including LCD, Motors, LDR, Ultrasonic.
- ISR, Timers, UART were used
- Utilized Embedded C and Eclipse for developing and debugging the firmware, ensuring optimal performance and minimal resource consumption.

Graduation Project | Autonomous Waiter Robot| *Python, ROS1, PYQT5, HTML, CSS, JavaScript*

- **Friendly Face:**
  - Created using HTML, CSS, and JavaScript.
  - Connected to ROS1 using RosBridge to display different expressions based on the robot's actions.
- **Ordering System:**
  - Developed using PYQT5 Frame Work for a responsive and visually appealing interface.
  - Allowed kitchen staff to manage orders and track the robot's status.
- **Web Content in PYQT5:**
  - Used QWebEngineView to embed the web-based face into the PYQT5 application.

My contribution in this project demonstrated skills in web development, ROS1 integration, and GUI design with PYQT5.

CERTIFICATION

edX Verified Certificate for CS50's Introduction to Computer Science, Harvard

Jul 2023- Dec 2023

IMT's Embedded Systems AVR

Jul 2023-Dec 2024

TECHNICAL SKILLS

Languages: Python, C, C++, HTML, CSS, JavaScript, Scratch
Frameworks: Flask, Pyqt5
Developer Tools: Git, VS Code, Visual Studio, PyCharm, Eclipse, Arduino IDE
Libraries: NumPy, Matplotlib, OpenCV
