Yousef Alsayed Abdelfattah

New Cairo, Egypt • yousefabuelkhear@gmail.com • 01153826643 • linkedin.com/in/yousef-alsayedabdelfattah • github.com/yousefattaff

AI Automation & Workflow Engineer with hands-on experience in LLM API integration, prompt engineering, multi-service pipeline design, and REST API orchestration. Proven ability to build and evaluate AI-powered workflows, structure data for reliable model behavior, and deliver quality-controlled outputs autonomously in remote environments. Strong background in multi-system integrations, automation pipeline architecture, and data extraction — with a self-directed work ethic and B2+ English proficiency.

EXPERIENCE

AI Workflow & Prompt Engineering Specialist | Outlier Scale AI — Remote (Freelance) *Nov 2024 – Jan 2025*

- Designed and evaluated LLM prompt frameworks (system instructions, chaining logic, context strategies) delivering structured, high-quality automated outputs across diverse task types.
- Applied RLHF to score model outputs against quality, safety, and instruction-following benchmarks — building expertise in output validation and AI pipeline QA.
- Ran multi-variable prompt engineering experiments, tuning parameters to optimize model behavior and mitigate hallucinations — directly analogous to n8n node sequencing and error-handling optimization.
- Operated fully remotely with self-directed workflow management, meeting strict quality SLAs asynchronously.

PROJECTS

LLM Automation Pipelines — AI Core Capstone | OpenAI API · LangChain · RAG · Python · REST APIs *Jan – Mar 2026*

- Built multi-step LLM workflows integrating OpenAI API with LangChain orchestration: prompt chaining, RAG retrieval, JSON-structured outputs, and input/output validation — mirroring n8n AI node integration patterns.
- Structured and preprocessed data (JSON, text) for consistent pipeline behavior; applied context-window and hallucination mitigation strategies across automation flows.

Autonomous Waiter Robot — Distributed Automation System | Python · ROS1 · REST API · WebSocket · PyQt5 · HTML/JS *2023 – 2024*

- Architected a multi-service automation system connecting web UI, ordering interface, and a robotics backend via REST APIs and WebSocket — demonstrating multi-system integration and real-time data synchronization.
- Designed inter-service state management and event-driven communication pipelines; handled structured data routing across services, analogous to webhook-driven n8n workflow orchestration.

TECHNICAL SKILLS

AI & LLM Workflows: OpenAI API, LangChain, RAG, Prompt Engineering, RLHF, Prompt Chaining, Hallucination Mitigation, Output Validation

Automation & Integration: REST API Design, Webhooks, Multi-system Pipelines, Data Processing (JSON, CSV), Web Scraping, Flask, Node.js (learning)

Cloud & Tooling: AWS (foundational), Git, Postman, VS Code, PyCharm

Languages: Python, JavaScript, TypeScript (learning), C, C++, HTML/CSS

EDUCATION & CERTIFICATIONS

B.Sc. Engineering | Misr University for Science and Technology, Giza, Egypt *Graduated June 2024 | GPA: 3.33*

LLM Engineering – AI Core Track (Ed Donner, 2026)
Diploma in AVR Embedded Systems (IMT, 2023)
CS50's Introduction to AI with Python (Harvard/edX, 2025)
CS50X: Introduction to Computer Science (Harvard/edX, 2023)
