AI Engineer Agentic Track: The Complete Agent and MCP Course

Yousef Alsayed Abdelfattah

AI Engineer | Building Production LLM amp; Multi-Agent Systems | Python, RAG, LangChain, FastAPI and Docker | AI Intern @ Arche Robotics

Cairo, Cairo, Egypt

Summary

I started out studying Mechatronics Engineering, where most of my time went into writing Embedded C for microcontrollers and building autonomous robots with ROS. Working with hardware taught me how to build systems that don’t just work in theory, but actually hold up in the real world. Over time, I got more interested in the intelligence side of things, which naturally led me from embedded systems and robotics into AI engineering and workflow automation.Right now, I’m an AI Engineering Intern at Arche Robotics, where I’ve been working on a real-time monitoring agent that reads live robot logs and helps the team catch anomalies early. Alongside that, I teach Python and AI basics to students at iSchool, and previously spent time at Outlier evaluating LLM outputs and working on RLHF.Lately, most of my learning and side projects have been focused on: • AI Agents amp; Automation: Building practical multi-agent workflows and automations using the OpenAI Agents SDK, CrewAI, LangGraph, and n8n. • RAG amp; Fine-Tuning: Setting up document retrieval pipelines with LangChain and ChromaDB, and experimenting with fine-tuning smaller local models like Qwen using QLoRA. • Backend amp; Deployment: Putting models behind FastAPI, using Pydantic and Langfuse to keep outputs reliable and traceable, and packaging things up with Docker.I recently finished my military service and I’m looking for a full-time AI Engineer or AI Automation role where I can keep learning, contribute to real products, and work with a great team.

Experience

Arche Robotics
Artificial Intelligence Intern
July 2026 - Present (4 months)
Istanbul, Türkiye

•Re-architected the serverless fleet-monitor-agent (Python, AWS Lambda, SAM) from 30-minute intervals to real-time DynamoDB Stream triggers (~0.3s capture) with a 6-stage skip ladder to control Groq LLM inference costs.
• Built a local-to-cloud emulation harness using FastMCP servers (stdio), live AWS DynamoDB tables, and Slack webhooks to test and ship fixes for 9 production issues without requiring corporate network keys.
• Resolved a P0 MCP nested-payload parsing bug, built a direct DynamoLogReader (GSI1) to reduce network latency, and added battery/ telemetry recovery watchdogs with per-robot timezone scheduling.
• Verified production reliability across 265 automated Pytest unit tests and 13 live-stream smoke tests.

iSchool
English-Speaking Programming instructor
May 2026 - Present (6 months)
Cairo, Egypt

• Instructed over 30 students in computer science and AI fundamentals across Grades 1–12.
• Developed and delivered project-based curricula in Python, AI, JavaScript, and UI/UX Design.
• Simplified complex programming concepts into engaging, interactive lessons to enhance problem-solving skills.

Egyptian Armed Forces Engineering Authority - الهيئة الهندسية للقوات المسلحة المصرية
Information Technology Help Desk
January 2025 - March 2026 (1 year 3 months)
Giza, Al Jizah, Egypt

Completed compulsory national military service with the Egyptian Armed Forces Engineering Authority, providing on-site IT infrastructure, hardware, and technical troubleshooting support.

Outlier
AI Software Engineer
November 2024 - January 2025 (3 months)

• Evaluated over 50 LLM responses daily across 6+ domains using Reinforcement Learning from Human Feedback (RLHF) to enhance model accuracy.
• Designed 20+ prompt engineering variations to identify and address hallucination and reasoning issues.

• Conducted QA reviews on 50+ analyst submissions, delivering feedback that improved annotation consistency in the evaluation pipeline.

Siemens
Siemens PLC (TIA Portal – S7-1200 & 1500)
September 2023 - September 2023 (1 month)
Cairo, Egypt

Designed and implemented industrial automation logic using Siemens TIA Portal for S7-1200 and S7-1500 PLCs.
Gained hands-on experience in:
• PLC programming (Ladder Logic & basic structured logic)
• Industrial control systems design
• Debugging and troubleshooting automation processes
• Understanding real-world factory workflows and system integration

DMG MORI
CNC Programming & Operation (Turning & Milling)
September 2022 - September 2022 (1 month)
Cairo, Egypt

• Developed foundational skills in CNC programming and operation for turning and milling processes at DMG MORI.
• Gained expertise in G-code basics and machining logic, enhancing operational efficiency.
• Set up and operated CNC machines, ensuring adherence to precision engineering standards.
• Acquired a strong understanding of manufacturing workflows and material processing concepts.

AOI Training Academy
Car Assembly & Maintenance Training
September 2021 - September 2021 (1 month)
Cairo, Egypt

Completed practical training in automotive assembly and maintenance processes.
Gained exposure to:
• Vehicle assembly workflows
• Mechanical systems and components
• Maintenance procedures and diagnostics
• Team-based industrial environment

Education

Misr University for Science and Technology

Bachelor's degree, Mechatronics, Robotics, and Automation Engineering · (September 2019 - June 2024)
